

Control to Catastrophe: Maximilian (V1.0)
Errata and Additions

The following list of errata and additions represents the work of the CtC community identifying errors and helping to improve the game. This document will develop over time with the intention that you can continue to use your book accounting for the notes included herein.

Section 6.2.3 Diagonal Move and Section 9.2.2 Diagonal Charge

Action – Clarification

Despite the repeated use of the word “diagonal” these are two different types of movement and the rules for one should not be conflated with the rules for the other.

Section 9.7.3: Melee Ties

Action – Replace the second paragraph with the following:

If a Unit suffers enough Hits to demand a CaT due to accumulated Hits (e.g., equals or exceeds its CaT Trigger) perform the test. Both sides might need to perform a CaT due to accumulated Hits but only one might fail and Break. Start with the Non-Active Side; if the Unit passes its CaT only then does the Active Side Unit test.

Section 10.4 Control Test (CT)

Action – Omit text

1st paragraph, second bulleted point: remove reference to Salvo.

Section 13.17.2 Movement (Elephant)

Action – Replace the last sentence with the following:

Note that Elephants lose a Movement Action when performing a Turning Move or an About-Face and become Unformed.
